

Amgen, Pfizer, and World-Class Professional Golfer Phil Mickelson Announce Partnership

November 6, 2010

Collaboration Aims to Empower Patients with Psoriatic Arthritis and Rheumatoid Arthritis to Seek Care

THOUSAND OAKS, Calif., and COLLEGEVILLE, Pa., Nov. 6, 2010 /PRNewswire via COMTEX/ --

Amgen Inc. (Nasdaq: AMGN), Pfizer Inc. (NYSE: PFE) and world-class professional golfer Phil Mickelson, have entered into a partnership to share Phil's experience with his diagnosis of psoriatic arthritis and treatment with Enbrel(R) (etanercept), and to encourage patients with similar symptoms to visit their doctor for proper assessment and care.

"This partnership with Amgen and Pfizer is important because being a psoriatic arthritis patient has motivated me to share my story," said Phil Mickelson. "I hope to encourage other patients to work with their doctors, learn about their condition and take action so that they have an opportunity to get back to some of the things that matter most to them."

Psoriatic arthritis is a form of arthritis caused by an overactive immune system that can affect not only the body's joints but also the skin. Approximately 600,000 Americans may have psoriatic arthritis. The main joint symptoms of psoriatic arthritis are pain, stiffness and swelling. Rheumatoid arthritis patients experience similar symptoms, however there are important differences between the two conditions, making it important to see a doctor.

Amgen and Pfizer were inspired by Mickelson's approach to managing his condition and by his continued drive to maintain his health. Those same qualities have kept him on top of the competitive world of golf and this is why the companies are excited to be partnering with him. Amgen and Pfizer believe his perseverance in the face of adversity will encourage patients to also work with their doctors to manage their condition and help them get back on course.

Further details and timing of future partnership initiatives will be announced in 2011.
