

Amgen To Participate In The 2016 World Medical Innovation Forum™ On Cancer

April 25, 2016

THOUSAND OAKS, Calif., April 25, 2016 /PRNewswire/ -- Amgen (NASDAQ:AMGN) today announced plans to participate in the World Medical Innovation Forum™ on cancer held April 25-27, 2016, in Boston. The World Medical Innovation Forum is a global gathering of senior corporate, investor and academic leaders. The forum was established to respond to the intensifying transformation of healthcare and its impact on innovation. This is the second year Amgen has participated in this event as a sponsor.

Three senior leaders from Amgen are scheduled to speak:

- Robert A. Bradway, chairman and chief executive officer, will participate in a fireside chat with Caroline Chen, a biotechnology and healthcare reporter at Bloomberg. The discussion will highlight Amgen's strategic focus in oncology/hematology, its approach to innovation, and its investment in immuno-oncology and combination therapies. This event is scheduled for 10:25 a.m. ET on Tuesday, April 26.
- Sean E. Harper, M.D., executive vice president of Research and Development, will participate on the "Creating a Disruptive Cancer Pipeline" panel moderated by Robert Tepper, M.D., a partner at Third Rock Ventures and an adjunct professor at Harvard Medical School. The expert panel members will discuss the considerations in cancer pipeline development, the tradeoffs and what it takes to maintain success over time. The panel is scheduled for 2:20 p.m. ET on Monday, April 25.
- David M. Reese, M.D., senior vice president of Translational Sciences, will present on the "Immunotherapy I: Checkpoint Activation and Cancer Vaccines" panel moderated by Nir Hacohen, Ph.D., an immunologist at the Massachusetts General Hospital Center for Immunology and Inflammatory Diseases and an associate professor of medicine at Harvard Medical School. The expert panel members will review significant long-term cancer remissions and detail the experimental vaccines in development. The panel is scheduled for 11:05 a.m. ET on Tuesday, April 26.

The above sessions will take place in the Novartis Ballroom of The Westin Copley Place, Boston.

About Amgen

Amgen is committed to unlocking the potential of biology for patients suffering from serious illnesses by discovering, developing, manufacturing and delivering innovative human therapeutics. This approach begins by using tools like advanced human genetics to unravel the complexities of disease and understand the fundamentals of human biology.

Amgen focuses on areas of high unmet medical need and leverages its biologics manufacturing expertise to strive for solutions that improve health outcomes and dramatically improve people's lives. A biotechnology pioneer since 1980, Amgen has grown to be one of the world's leading independent biotechnology companies, has reached millions of patients around the world and is developing a pipeline of medicines with breakaway potential.

Forward-Looking Statements

This news release contains forward-looking statements that are based on the current expectations and beliefs of Amgen. All statements, other than statements of historical fact, are statements that could be deemed forward-looking statements, including estimates of revenues, operating margins, capital expenditures, cash, other financial metrics, expected legal, arbitration, political, regulatory or clinical results or practices, customer and prescriber patterns or practices, reimbursement activities and outcomes and other such estimates and results. Forward-looking statements involve significant risks and uncertainties, including those discussed below and more fully described in the Securities and Exchange Commission reports filed by Amgen, including our most recent annual report on Form 10-K and any subsequent periodic reports on Form 10-Q and Form 8-K. Unless otherwise noted, Amgen is providing this information as of the date of this news release and does not undertake any obligation to update any forward-looking statements contained in this document as a result of new information, future events or otherwise.

No forward-looking statement can be guaranteed and actual results may differ materially from those we project. Our results may be affected by our ability to successfully market both new and existing products domestically and internationally, clinical and regulatory developments involving current and future products, sales growth of recently launched products, competition from other products including biosimilars, difficulties or delays in manufacturing our products and global economic conditions. In addition, sales of our products are affected by pricing pressure, political and public scrutiny and reimbursement policies imposed by third-party payers, including governments, private insurance plans and managed care providers and may be affected by regulatory, clinical and guideline developments and domestic and international trends toward managed care and healthcare cost containment. Furthermore, our research, testing, pricing, marketing and other operations are subject to extensive regulation by domestic and foreign government regulatory authorities. We or others could identify safety, side effects or manufacturing problems with our products after they are on the market. Our business may be impacted by government investigations, litigation and product liability claims. In addition, our business may be impacted by the adoption of new tax legislation or exposure to additional tax liabilities. If we fail to meet the compliance obligations in the corporate integrity agreement between us and the U.S. government, we could become subject to significant sanctions. Further, while we routinely obtain patents for our products and technology, the protection offered by our patents and patent applications may be challenged, invalidated or circumvented by our competitors, or we may fail to prevail in present and future intellectual property litigation. We perform a substantial amount of our commercial manufacturing activities at a few key facilities and also depend on third parties for a portion of our manufacturing activities, and limits on supply may constrain sales of certain of our current products and product candidate development. In addition, we compete with other companies with respect to many of our marketed products as well as for the discovery and development of new products. Discovery or identification of new product candidates cannot be guaranteed and movement from concept to product is uncertain; consequently, there can be no guarantee that any particular product candidate will be successful and become a commercial product. Further, some raw materials, medical devices and component parts for our products

are supplied by sole third-party suppliers. The discovery of significant problems with a product similar to one of our products that implicate an entire class of products could have a material adverse effect on sales of the affected products and on our business and results of operations. Our efforts to acquire other companies or products and to integrate the operations of companies we have acquired may not be successful. We may not be able to access the capital and credit markets on terms that are favorable to us, or at all. We are increasingly dependent on information technology systems, infrastructure and data security. Our stock price is volatile and may be affected by a number of events. Our business performance could affect or limit the ability of our Board of Directors to declare a dividend or our ability to pay a dividend or repurchase our common stock.
