

Amgen Establishes Wholly-Owned Affiliate In Japan

April 1, 2020

Amgen K.K. Will Focus on Bringing Amgen's Full Global Pipeline to Japanese Patients

THOUSAND OAKS, Calif., March 31, 2020 /PRNewswire/ -- Amgen (NASDAQ:AMGN) today announced that it has consummated the purchase from Astellas of 49% of shares of Amgen Astellas BioPharma K.K. (AABP), a joint venture between Amgen and Astellas established in 2013. AABP, which is now a wholly-owned Amgen affiliate in Japan renamed Amgen K.K., has enabled Amgen to build a strong presence in Japan as it advances treatments for serious illnesses.

"With roughly one-quarter of its population 65 or older, Japan will require ever more innovative medicines to treat diseases associated with the aging process," said Robert A. Bradway, chairman and chief executive officer of Amgen. "Our current and emerging portfolio of medicines matches up well with the needs of patients in Japan."

"Amgen medicines have been available for patients in Japan for many years through local partnerships, including most recently our joint venture with Astellas. Going forward, Amgen K.K. will continue marketing our treatments for patients with cardiovascular disease, cancer and osteoporosis, as well as new medicines emerging from our pipeline," said Steve Sugino, president and representative director of Amgen K.K. "As Amgen K.K., we will continue to work and invest to become an even more valuable member of the healthcare community in Japan."

Since 2011, Amgen has expanded its geographic presence from approximately 50 to 100 countries, enabling the company to play a growing role in serving the rapidly increasing demand for better healthcare around the world. In 2019, Amgen invested more than \$4 billion in research and development to advance numerous potential new medicines across all stages of our pipeline.

About Amgen K.K.

Amgen K.K. is a wholly owned Japanese affiliate of Amgen Inc., one of the largest independent biotechnology companies in the world. Amgen K.K., formerly Amgen Astellas BioPharma K.K., was established in October 2013 as joint venture between Amgen and Astellas, and changed its corporate name when it became a wholly owned subsidiary of Amgen. Under the mission, "To serve patients," Amgen K.K. focuses on the development of innovative medicines, and addressing severe unmet medical needs of patients in Japan by bringing Amgen's global pipelines, ranging from cardiovascular diseases, cancer, bone diseases through neurological diseases.

About Amgen

Amgen is committed to unlocking the potential of biology for patients suffering from serious illnesses by discovering, developing, manufacturing and delivering innovative human therapeutics. This approach begins by using tools like advanced human genetics to unravel the complexities of disease and understand the fundamentals of human biology.

Amgen focuses on areas of high unmet medical need and leverages its biologics manufacturing expertise to strive for solutions that improve health outcomes and dramatically improve people's lives. A biotechnology pioneer since 1980, Amgen has grown to be the world's largest independent biotechnology company, has reached millions of patients around the world and is developing a pipeline of medicines with breakaway potential.

Amgen Forward-Looking Statements

This communication contains forward-looking statements that are based on the current expectations and beliefs of Amgen. All statements, other than statements of historical fact, are statements that could be deemed forward-looking statements, including any statements on the outcome, benefits and synergies of collaborations with any other company, including BeiGene, Ltd., or the Otezla[®] (apremilast) acquisition, including anticipated Otezla sales growth and the timing of non-GAAP EPS accretion, as well as estimates of revenues, operating margins, capital expenditures, cash, other financial metrics, expected legal, arbitration, political, regulatory or clinical results or practices, customer and prescriber patterns or practices, reimbursement activities and outcomes, effects of pandemics or other widespread health problems such as the ongoing COVID-19 pandemic on our business, and other such estimates and results. Forward-looking statements involve significant risks and uncertainties, including those discussed below and more fully described in the Securities and Exchange Commission reports filed by Amgen, including our most recent annual report on Form 10-K and any subsequent periodic reports on Form 10-Q and current reports on Form 8-K. Unless otherwise noted, Amgen is providing this information as of the date of this news release and does not undertake any obligation to update any forward-looking statements contained in this document as a result of new information, future events or otherwise.

No forward-looking statement can be guaranteed and actual results may differ materially from those we project. Our results may be affected by our ability to successfully market both new and existing products domestically and internationally, clinical and regulatory developments involving current and future products, sales growth of recently launched products, competition from other products including biosimilars, difficulties or delays in manufacturing our products and global economic conditions. In addition, sales of our products are affected by pricing pressure, political and public scrutiny and reimbursement policies imposed by third-party payers, including governments, private insurance plans and managed care providers and may be affected by regulatory, clinical and guideline developments and domestic and international trends toward managed care and healthcare cost containment. Furthermore, our research, testing, pricing, marketing and other operations are subject to extensive regulation by domestic and foreign government regulatory authorities. We or others could identify safety, side effects or manufacturing problems with our products, including our devices, after they are on the market. Our business may be impacted by government investigations, litigation and product liability claims. In addition, our business may be impacted by the adoption of new tax legislation or exposure to additional tax liabilities. If we fail to meet the compliance obligations in the corporate integrity agreement between us and the U.S. government, we could become subject to significant sanctions. Further, while we routinely obtain patents for our products and technology, the protection offered by our patents and patent applications may be challenged, invalidated or circumvented by our competitors, or we may fail to prevail in present and future intellectual property litigation. We perform a substantial amount of our commercial manufacturing activities at a few key facilities, including in Puerto Rico, and also depend on third parties for a portion of our manufacturing activities, and limits on supply may constrain sales of certain of our current products and product candidate development. An outbreak of disease or similar public health threat, such as COVID-19, and the public and governmental effort to mitigate against the spread of such disease, could have a

significant adverse effect on the supply of materials for our manufacturing activities, the distribution of our products, the commercialization of our product candidates, and our clinical trial operations, and any such events may have a material adverse effect on our product sales, business and results of operations. We rely on collaborations with third parties for the development of some of our product candidates and for the commercialization and sales of some of our commercial products. In addition, we compete with other companies with respect to many of our marketed products as well as for the discovery and development of new products. Discovery or identification of new product candidates or development of new indications for existing products cannot be guaranteed and movement from concept to product is uncertain; consequently, there can be no guarantee that any particular product candidate or development of a new indication for an existing product will be successful and become a commercial product. Further, some raw materials, medical devices and component parts for our products are supplied by sole third-party suppliers. Certain of our distributors, customers and payers have substantial purchasing leverage in their dealings with us. The discovery of significant problems with a product similar to one of our products that implicate an entire class of products could have a material adverse effect on sales of the affected products and on our business and results of operations. Our efforts to collaborate with or acquire other companies, products or technology, and to integrate the operations of companies or to support the products or technology we have acquired, may not be successful. A breakdown, cyberattack or information security breach could compromise the confidentiality, integrity and availability of our systems and our data. Our stock price is volatile and may be affected by a number of events. Our business performance could affect or limit the ability of our Board of Directors to declare a dividend or our ability to pay a dividend or repurchase our common stock. We may not be able to access the capital and credit markets on terms that are favorable to us, or at all.
